Murachs ADO.NET 4 Database Programming with C# 2010

By Anne Boehm

- quickly create Windows and web applications by dragging-and-dropping data controls in Visual Studio 2010
- code your own presentation, business, and database classes with ADO.NET 4 to build 3-layer applications...the route the professionals take for flexibility and control
- display and manipulate data in web applications by using ASP.NET controls designed specifically for that purpose, like GridView and DetailsView
- work with XML-specific features of ADO.NET to read, write, and manipulate XML data in your applications
- use Visual Studio’s Report Designer and ReportViewer control to create and display reports in both Windows and web applications
- use LINQ to SQL instead of standard SQL so you can query databases using C constructs
- create Entity Data Models so you can use LINQ to Entities to work with business objects, like invoices, while the Entity Framework handles the database details
- Practice exercises at the end of every chapter and complete database applications throughout help you master every skill...
