Health Professions Education: A Bridge to Quality recommends that clinicians communicate using their patient’s favorite mode of communication, which is central to patient-centered care. Learn to Listen. Speaking and writing are only part of communicating; listening is equally essential. By not listening properly, it is easy to miss important patient information. Listening errors are often the results of multitasking. NurseTogether.com suggests that when nurses feel their concentration slipping, they should stop and refocus.

Mindfulness is one technique people use to stay in the moment and im A profession is an occupation founded upon specialized educational training, the purpose of which is to supply disinterested objective counsel and service to others, for a direct and definite compensation, wholly apart from expectation of other business gain. Medieval and early modern tradition recognized only three professions: divinity, medicine, and law, which were called the learned professions. A profession is not a trade and not an industry. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.
