A Sociological Approach to Acquired Brain Injury and Identity; Routledge, 2017; 152 pages; 2017; 9781317186694; Jonathan Harvey

20% Discount with this Flyer! A Sociological Approach to Acquired Brain Injury and Identity. By Jonathan Harvey, University of Southampton, UK. Series: Interdisciplinary Disability Studies. This path-breaking book explores the (re)construction of identity after acquired brain injury (ABI). It draws meaning from the every-day experiences of six male ABI survivors, and investigates their identity (re)construction after their ABI. This study aims to identify the difficulties experienced by individuals with Acquired Brain Injuries (ABI) across a range of services associated with their rehabilitation and secondly to identify ways to better support individuals through their long term rehabilitation in the future by developing a new intervention. Free delivery for many products! Inspired by the author’s personal experience of sustaining acquired brain injury (ABI), this path-breaking book explores the (re)construction of identity after ABI. Read full description. See details and exclusions - A Sociological Approach to Acquired Brain Injury and Identity. Buy it now. Add to basket. Through a social constructionist perspective, we will explore both socio-linguistic, social psychological and sociological theories. Due to the complexities of the subject, we rely on many different theories as opposed to one or two overarching theories. With these theories in mind, we will conduct a focus group interview. Additionally, we chose David Block’s approach to identity, because we had a mutual interest and our aim resembled his. He too, is interested in the link between identity and language and even more appropriately, he focuses on identity construction through a second language. He also tries to show identity by the means of many different theorists, where many of them, including Block, are either in the field of poststructuralism or social constructionism. The first book to present a comprehensive team approach to rehabilitation of ABI survivors, Acquired Brain Injury gives medical and clinical specialists a deeper understanding of not only each other’s roles, but also their complementary functions. - The medical management of ABI—neurosurgery, neurology, physiatry—and the medical specialties involved—neuropsychiatry, neurourology and neurooptometry. - In-depth discussion of the roles of occupational, speech-language, and balance rehabilitation. - Separate chapters on nursing, neuropsychology, and case management. - Behavioral and emotional challenge... - Acquired Brain Injury and the Family Challenges and Interventions. 275. LongTerm Challenges.
