Sickness causes guinea pigs to be stressed; if your pet is sick, hold it as little as possible. Antibiotics can cause problems in guinea pigs’ digestive tracts, so your pet may not tolerate these medications. Most disease treatments should include extra vitamin C. Diarrhea and other illnesses may cause your guinea pig to become dehydrated. Guinea pigs are very sensitive to the effects of many antibiotics. These toxic effects may occur directly as a result of the medication or because the antibiotic causes an imbalance in the bacteria that usually live in your pet’s intestines. Many antibiotics, including penicillin, ampicillin, lincomycin, clindamycin, vancomycin, erythromycin, tylosin, tetracycline, and chlorotetracycline, can cause this problem. 32 pages : 27 cm.
