Susanne Mohr. Mouth actions in sign languages have been controversially discussed but the sociolinguistic factors determining their form and functions remain uncertain. This first empirical analysis of mouth actions in Irish Sign Language focuses on correlations with gender, age, and word class. It contributes to the linguistic description of ISL, research into non-manuals in sign languages, and is relevant for the cross-modal study of word classes. The sign language of Ireland, used primarily in the Republic of Ireland. It is also used in Northern Ireland, alongside British Sign Language (BSL). Irish Sign Language is more closely related to French Sign Language (LSF) than to BSL, though it has influence from both languages. It has influenced sign languages in Australia and South Africa, and has little relation to either spoken Irish or English. ISL is unique among sign This first empirical analysis of mouth actions in Irish Sign Language focuses on correlations with gender, age, and word class.
