Whale watching in Australia has grown tremendously over the last decade. The long whale season in Australia – between May and November – no doubt contributes to its growing popularity. But whale watching season differs throughout the country and so do the kinds of whales you’ll see. In May, whale groups including humpbacks and southern right whales migrate from the waters of the Antarctic to the tropical waters of Australia for mating season. Minke whales and even the rare blue whale also make a stop in Australia’s waters throughout their migration.
